

API Set Up Instructions for Kraken.com

1. This documentation assumes that you have already set up an account on Kraken.com and are ready to start using the Copy Pro Traders System. **Very Important:** Further down in the instructions you will create an API and Private/ Secret key. Be sure to Copy and Paste the API Key and Secret Key somewhere safe so that you can access it.
 2. Go to www.kraken.com to sign in. You should have 2 Factor Authentication (2FA) already set up.
 3. Click the personal avatar icon near the top right with your name on it.
 4. Click on "Security" then "API".
 5. On the API Management page, click on Add Key near the top right of the white section.
 6. A new section will appear. In the first box, provide a name for your new API key that you are creating. Anything that will help you know it is with CPT. To do that just type over the default label that starts with "api-key-.....". (What they display is not your actual API key.)
 7. The next field asks you for a Nonce window. Enter 5000. (It does not have anything to do with your crypto assets.)
 8. The next section is very important. There are 7 checkboxes to mark:
 - Query Funds
 - Query Open Orders & Trades
 - Query Closed Orders & Trades
 - Modify Orders
 - Cancel/Close Orders
 - Query Ledger Entries
 - Access WebSockets API
- Do NOT mark the checkbox for "Withdraw Funds".**
9. After the check mark section you can scroll down to "Generate Key".
 10. Look towards the top of the page and you will see your new API key and Private Key. Copy both of them and paste them somewhere safe. Be sure to label each one separately and accurately.

CopyProTraders

11. Now that you have your API key and Private key, go to the CopyProTraders.com site and click on My Dashboard and then on “Exchange Settings”.
12. Select Kraken in the drop-down menu in the first section.
13. Check the Box to “Activate Trading”.
14. Enter the Amount of USD to use per trade (minimum 52). Use whole numbers without commas, decimals or the dollar sign.
15. Select your Pro Trader.
16. Enter the API Key and Private Key in the Section labeled “Kraken”.
17. Click “Save” near the middle/bottom the page to save your settings.
18. Crypto Funds will need to be available in USDT on Kraken to begin taking trades using CopyProTraders.com. If you do not have USDT (Tether), look at the other pdf on how to fund Kraken.

The screenshot shows the Kraken trading platform interface. At the top right, the user's name is displayed as 'Name'. A dropdown menu is open, showing options: Settings, Security, Overview, 2FA Settings, Global Settings Lock, API, Get Verified, and Sign Out. A blue circle highlights the 'Security' and 'API' options, with arrows pointing to them from a text box on the right. The text box contains the following instructions:

- 1 - Click on your Name
- 2 - Click "Security"
- 3 - Click "API"

The background of the screenshot shows the 'Balances' section with a table:

Asset	Amount	Price	24H Chg	Value
US Dollar (USD)	10.990000	—	—	—
